

# SUNDS Resin

Improved runnability and resin saving

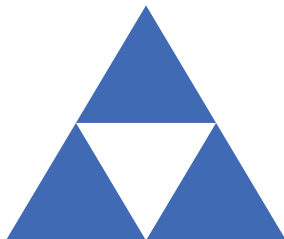

Sunds optimized resin system advantages:

- Multiple nozzle arrangement to spread out the resin even to the fiber for optimized resin distribution.
- Separate steam injection to improve resin distribution.
- Double walled water cooled resin pipe to avoid pre-cure of resin.
- Automatic cleaning of nozzles.
- Proven and solid design, stainless steel components.
- Reduced resin consumption because of the multiple nozzle arrangement and unique mixing chamber.
- Less maintenance cleaning because of no build ups in blowline.
- Improved panel properties such as internal bond and no resin spots.
- Easy installation – plug in design.

Three cornerstones for high performance resin system:

Precise resin distribution with efficient mixing

High uptime

Low resin consumption

Double walled water cooled resin pipe to avoid pre-cure of resin

Reduce resin consumption

Easy installation
